

Fruits & Seeds Calendar 2026

UNITED NATIONS DECADE ON
**ECOSYSTEM
RESTORATION**
2021-2030

RANWA

www.ranwa.org

The United Nations has designated 2021–2030 as the UN Decade on Ecosystem Restoration, emphasizing the urgent need to revive degraded natural landscapes affected by anthropogenic activities and natural calamities. One of the most effective ways to support 'Eco-restoration' is through the propagation of indigenous plant species. By and large tree species are preferred for plantation activities overlooking shrubs and lianas, which are also essential to restore ecosystem balance. However, restoration ecologists & plant nursery growers are often unaware of the appropriate time & season of seed collection from wild populations so that healthy saplings can be raised. We at RANWA, Pune, felt that a comprehensive month-wise 'Fruit & Seed Calendar' can immensely help to fill this gap, and hence a 'Yearly Calendar', has been developed covering dry deciduous to evergreen forests of Maharashtra known for its exceptional biodiversity. In this calendar we have documented the fruiting patterns of 259 indigenous species of plants (191 trees, 29 shrubs, 32 lianas, and 7 climbers), providing clear guidance on optimal fruit maturation and seed collection periods. It should be noted that fruits take around 2-4 months to attain maturity. So for example, if a particular species is attaining peak fruit maturity say by mid March, then it means fruits can be collected in late February and April also. Or if one sees raw fruits say in the month of February, then ripe fruits can be harvested in March or April as well. In northern Western Ghats and other parts of Maharashtra, woody species exhibit characteristic fruiting peak in the dry summer season while monsoon and post monsoon has few species maturing. We believe this will serve as a valuable resource for ecologists, naturalists, conservation practitioners, and local communities, helping them identify the ideal time for seed collection and contribute effectively to ecological restoration efforts. We sincerely thank Navendu Page and Aparna Watve for their inputs and suggestions.

About RANWA (Research and Action in Natural Wealth Administration):

RANWA is a three decade old NGO (Non Governmental Organization) Registered as a Public Charitable Trust at Pune, Maharashtra, India.

RANWA activities include :

Research: Documentation of plants, animals and understanding human-nature relationships in Maharashtra, especially western region.

Education: Conduct talks and slide shows, nature trails for general public and students alike for introducing them to nature.

Action: Plantation of local plant species, environmental awareness campaigns, developing theme parks such as Butterfly Gardens, Lotus Ponds, Oxygen Park etc.

RANWA Activities are supported by well wishers including Government and Private Sector bodies.

Calendar Concept, Photographs and Information: Dr. Ankur Patwardhan
